DETAILED ACTION

Claims 1-10 are currently pending.

Restriction Requirement

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8,10, drawn to method of identifying a nucleic acid, classified in class 435, subclass 06.
- II. Claim 9, drawn to method for analyzing a nucleic acid sequence, classified in class 435, subclass 06.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as patentably distinct methods which differ in their objectives and have different steps - forming hybridization product with a probe in Group I vs forming hybridization product with a label in Group II. The methods do not rely upon each other for their ultimate use and they require non-coextensive literature searches.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
